

### Galcon DC6 & DC12S

#### **Application:**

Battery operated controller used to control Galcon DCV-25mm actuators for watering lawns and garden beds.

#### **Features:**

- Operation of 6 to 12 valves plus a master valve (or pump using latching relay, optional extra).
- Separate irrigation schedule programmable for each valve.
- Up to 4 irrigation activations per day per valve in programmable weekly schedule mode.
- Programmable weekly/cyclical irrigation schedules.
- Irrigation window in cyclical program mode (Loop mode).
- Irrigation duration: 1 second to 12 hours.
- Irrigation frequency from once every minute to once every 30 days in cyclical program.
- Manual operation of individual valves.
- Sequential manual operation of all valves.
- Operation of valves up to 50 metres from the controller.

DC6

#### **Main Features Specific to DC12S**

- Weather resistant.
- Operated by four 9V alkaline batteries.
- Operates Galcon DCV-25mm only.

#### **Main Features Specific to DC6**

- Weather resistant.
- Operated by two 9V alkaline batteries.
- Operates Galcon DCV-25mm only.

DC12S

Description	Code
6 Station Battery operated controller	DC6
12 Station Battery operated controller	DC12S
25mm Valve with Actuator	DCV25
