

ABOVEGROUND SPOT-SPITTER®

THE RIGHT CHOICE IN MINI-SPRAYERS

Ease-of-use, performance, and low-cost have made our AboveGround SPOT-SPITTER® a favorite among greenhouse and nursery growers worldwide. Simplicity in design and easy installation mean lower labor and material costs. And since we offer a variety of wetting patterns and flow rates, you're sure to find a SPOT-SPITTER that fits your application.

The SPOT-SPITTER controls water flow at the emitter, where it matters most. Other mini-sprayers require tedious, labor-intensive modifications of tube-lengths to develop the flow characteristics you can get in seconds using a SPOT-SPITTER.

And unlike other mini-sprayers which tend to deform or break at the spray tip, the Roberts SPOT-SPITTER is made from premium resins, which resist tip damage and provide years of trouble-free operation.

The loyalty to this product among veteran growers, and the continued adoption of it by each new generation, is a great source of pride to us at Roberts Irrigation. The SPOT-SPITTER embodies the values of tradition, integrity, and innovation you can expect from Roberts Irrigation, a world leader in cost-effective, precision water delivery systems.

First, and still the best, the SPOT-SPITTER is the most cost-effective, versatile solution for all your mini-spray nursery and greenhouse applications. Don't be fooled by imitations. We invented this product, and we've yet to see an imitation that can match the reliability and performance that has made the SPOT-SPITTER the gold standard mini-sprayer for more than 20 years.

The AboveGround SPOT-SPITTER® is the most cost-effective, versatile solution for all your mini-spray nursery and greenhouse applications. The SPOT-SPITTER is ideal for any application in which a soil-wetting mini-spray pattern is desired.

Installation and maintenance are a breeze. To install, just slide a length of Roberts polyethylene tubing over the selected spray tip and insert the other end directly into a Roberts hose. The natural “memory” inherent in all Roberts hose and tubing will create a water-tight fit in seconds, without the need for tools, glue, or additional fittings. It takes just seconds to get the flow characteristics you want. And the SPOT-SPITTER can easily be turned off by reversing it and placing the shut-off tip into the tube.

Every SPOT-SPITTER is manufactured from premium UV-resistant resin to provide years of trouble-free service in both indoor and outdoor applications. Sturdy stabilizer ribs help lock each SPOT-SPITTER in the soil just where you want it, and extra-thick construction resists flexing and breakage.

As part of the Roberts family of premium products, you can rely on the AboveGround SPOT-SPITTER to deliver unmatched performance for all your mini-spray nursery and greenhouse applications.

Color-coded SPOT-SPITTERs deliver a variety of flow rates and patterns. Exclusive directional indicator nub allows quick placement by fast hands. Two sizes available: Standard (4.75"/12 cm) and Short (2.75"/7 cm).

Part #	Product Description	STANDARD			METRIC			Usage
		PSI	GPM	GPH	BAR	LPM	LPH
