

# TELESCOPIC SPRINKLER RISER

**Description** The Telescopic Sprinkler Riser is designed to raise or lower a sprinkler head with minimum digging. The TSR can be easily adjusted by turning the sprinkler clockwise to increase height and counter clockwise to lower height. The internal threads are shielded so they wont jam when adjusting the head up or down.

- Features**
- Provides a simple method of adjusting sprinkler height down for settling and up for turf growth.
  - Eliminates excess digging.
  - Allows sprinklers to be installed in "up" position, then adjusted down, thereby reducing dirt intrusion in the sprinkler.
  - Remains stable when set, but is easily adjusted.
  - Threads onto sprinkler with tapered thread, simply turn-sprinkler to adjust.
  - Eliminates the need to know where the submain is located relative to the sprinkler.
  - The TSR- 25 can be raised up to 80mm to adjust sprinkler height to clear growth.
